G. Hartzell & Son announces a new concept in Dental Hygiene/Periodontal Instrumentation.

G. Hartzell & Son is now manufacturing diamond furcation files. The diamond files feature a diamond-coating on one side of the tip of each instrument as you can see in the picture below. Two instruments are currently available - the #DF1/2 and #DF3/4. The handle on the instruments is G. Hartzell & Son's large 3/8" extremely lightweight style.

This is a revolutionary new concept in the style of dental instrumentation and is particularly well-adapted for use with dental endoscopy.
